

ptc® apexada™ *v5.2 Embedded for Wind River VxWorks 7 Armv8 64-bit is now Available!*

PTC releases new Linux/Intel64-hosted embedded Ada compiler targeting VxWorks 7 on 64-bit Armv8 processors

Boston, MA – June 1, 2021 — PTC (NASDAQ: PTC) today announced the release of its new ApexAda v5.2 Linux/Intel64-hosted embedded Ada compiler and runtime environment for the Wind River VxWorks 7 real-time operating system on Armv8 64-bit (aarch64) processors. With the release of this new product, PTC extends the capabilities of its extensive line of native and cross compilers for Ada application development with ApexAda v5.2 embedded with support for VxWorks 7 Armv8 64-bit (aarch64) targets. Included with the 64-bit embedded compiler is the PTC® ApexAda v5.2 64-bit compiler for Linux native application development. Also included is the integrated ApexAda 64-bit C/C++ compiler which facilitates seamless development of mixed-language applications written in Ada, C, and C++. ApexAda V5.2 Embedded compilers provide a complete cross-development toolchain hosted from Linux distributions including RedHat Enterprise Edition, CentOS, and SUSE.

PTC ApexAda Embedded v5.2 for 64-bit VxWorks 7 targets supports Ada 95 & Ada 2005 64-bit application development and execution on Armv8 64-bit processors. New or updated features and functions include:

- Support for 64-bit cross compilation and embedded target execution
- Development toolchain hosted from Linux distributions including RedHat Enterprise Edition, CentOS, and SUSE
- ApexAda compiler supporting Ada 95 / Ada 2005 language editions
- ApexAda C/C++ compiler for seamless mixed-language application development
- ApexAda debugger using Wind River Target Communication Framework (TCF) for download and control of 64-bit Ada applications on embedded targets running VxWorks V7
- Incorporates compiler, runtime, and user-interface corrections
- Documentation updates to describe use of VxWorks 7 with ApexAda

“As a Wind River ISV partner, PTC is very pleased to offer this new ApexAda product targeting VxWorks 7 on Armv8 processors leveraging our new Armv8 code generation capability within the ApexAda compiler technology.” stated Shawn Fanning, Software Development Director at PTC. “When we introduced Armv8 code generation in ApexAda, we set out to open up a whole new landscape for embedded application development using ApexAda Embedded products and the introduction of this new product targeting VxWorks 7 on Armv8 processors enables substantial modernization opportunities for customers who have historically used ApexAda products targeting VxWorks on PowerPC or Intel processors. Driven by the mobile consumer market, Arm processors provide high performance and low power advantages over PowerPC and Intel processors. We think these advantages combined with the flexibility provided by VxWorks 7 and the availability of low-cost and high-performance consumer-grade development boards as well as ruggedized 64-bit Arm boards will provide substantial benefits to our customers looking to modernize existing deployed applications while mitigating risks through continued use of the same time-proven and industrial-strength ApexAda compiler technology.”

About the PTC Family of Ada Products

PTC ApexAda together with PTC ObjectAda product lines of native and cross development tools and runtime environments provide host development and execution support for the most popular environments including Windows, Linux and various UNIX operating systems. PTC cross development tools hosted on Windows, Linux or UNIX systems target PowerPC, Intel, and Armv8 target processors in support of “bare” hardware execution or in conjunction with popular RTOSs.

Availability

PTC ApexAda v5.2 for Linux hosts targeting VxWorks v7 on Armv8 processors is immediately available. License pricing is available on request.

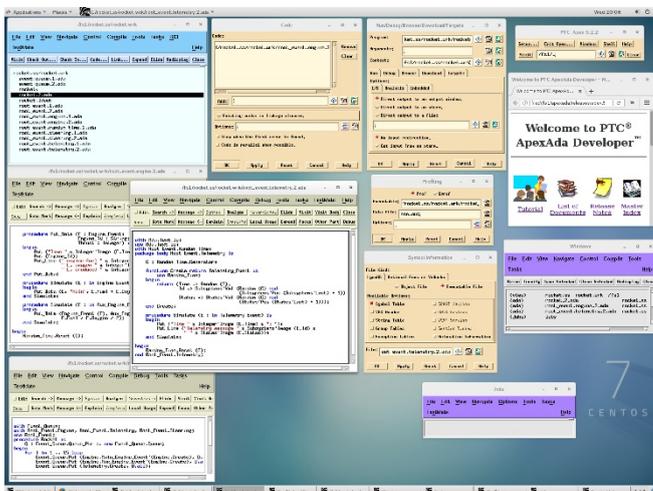

Full Product Details

PTC ApexAda®

PTC ApexAda provides a single, scalable host development environment that integrates design, implementation, testing, configuration management, and process management for native or cross development projects.

More than just a set of loosely integrated development tools, PTC ApexAda Developer products are designed specifically for large-scale team development of long lifecycle applications. Such applications can survive only when they are developed using sound software engineering best practices, and PTC ApexAda Developer is built on the fundamental principles that govern large-scale modern software engineering.

The software also provides architectural control features that are essential for developing and managing large-scale applications. These applications are already difficult to design, but when they are improperly architected they are even more difficult to maintain. PTC ApexAda Developer helps protect the architectural integrity of application design throughout the software development lifecycle.

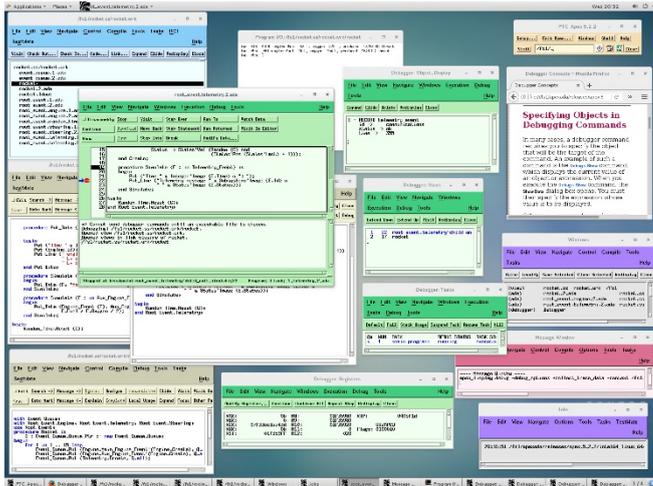

Large applications typically have special needs for configuration management. Managing change becomes extremely complex with the addition of

more development staff. PTC ApexAda Developer includes technology for controlling versions and configurations in such an environment, leveraging architectural subsystems that reside above the programming language constructs.

Key Benefits

- Leverages best practices for large-scale application development
- Supports a controlled iterative development so that smaller increments of change can be edited, built, tested and deployed
 - Reduces risk and improves time-to-market
- Delivers encapsulation restricting access and manipulation to only meaningful operations
 - Simplifies communication about real-world constructs and improves the reliability of accessing and changing data
- Includes facilities for creating software architectures (subsystems) larger than that provided by the programming language itself
 - Fosters large-scale software reuse and creates software that is adaptable in response to changing operational conditions.
- Provides testing tools directly within the development environment to facilitate frequent developer-led testing
 - Allows bugs to be found sooner and corrected more cost-efficiently
- Manages parallel development simply and without high overhead due to configuration management commands and facilities being built into the development environment
 - CM is more transparent to developers and less intrusive to work activities

- Supports embedded cross-compilation as well as native compilation
 - Seamlessly extends the host-based development tools to allow software to work directly on the target execution platform
- Results in less redundancy in development tools, higher productivity, and less rework from modification

Capabilities and specifications

- Full development lifecycle in one common IDE with integrated coding and debugging tools
- Architectural control for developing and managing large-scale applications
- Version control and configuration management
- Automated tooling that goes beyond compilers and debuggers and supports all lifecycle of development needs, from conception to testing
- PTC ApexAda Developer Enterprise Edition contains:
 - PTC ApexAda (IDE for host-based Ada05, Ada95 and mixed Ada/C/C++ development)
 - Integrated coding and debugging tools (language-based editor, program browser, incremental compiler, and comprehensive, integrated debugging facility)
 - Configuration Management and Version Control (CMVC)
 - Test Mate (test management system for native and cross development including unit, integration, system test, and coverage analysis, including modified condition/decision coverage)

- PTC ApexAda Developer Base Edition contains:
 - PTC ApexAda (IDE for host-based Ada95, Ada83, and mixed Ada/C/C++ development)
 - Configuration Management and Version Control (CMVC)
- PTC ApexAda Embedded Developer Enterprise Edition further extends the PTC ApexAda Developer Enterprise Edition tool chain with Instruction Set Simulation (ISSIM), Ethernet Support (ENet), and Patching Linker. *(Features vary depending on the target architecture and RTOS.)*

Platforms and system requirements

- PTC ApexAda Developer Enterprise Edition runs on the following host platforms:
 - Solaris®/SPARC
 - Solaris/x86
 - Linux®/x86, Linux/x86_64
- PTC ApexAda Embedded Developer Enterprise Edition runs on the following host platforms:
 - Solaris/SPARC
 - Linux/x86, Linux/x86_64
- PTC ApexAda Embedded Developer Enterprise Edition targets PowerPC processors with the following real-time operating systems:
 - PTC ApexAda Exec
 - Wind River® VxWorks®
 - Lynx Software Technologies LynxOS®
- PTC ApexAda Embedded Developer Enterprise Edition targets x86 and x86_64 with the following real-time operating systems:
 - PTC ApexAda Exec
 - Wind River® VxWorks®
- PTC ApexAda Embedded Developer Enterprise Edition targets Armv8 64-bit (aarch64) with the following operating systems:
 - Linux
 - Wind River® VxWorks®
